recessions are economically painful, then depressions are like	•

## Novocain.

I. The mood of most Americans in the late 1920s was optimistic. Unfortunately, there was a disconnect between people's perception of how life was and what the reality was.

The Economy in the Late 1920s

- II. For instance, people's <u>perception</u> (MEANING \_\_\_\_\_\_\_)
  was that the "Roaring Twenties" was a good time for all.
  - A. Remember, there was all of that new technology, cars, electricity, national heroes, bootlegging, flappers, and people making more money while working fewer hours. The number of infant deaths had also declined in the 1920s, and life expectancy had lengthened due to medical advances. The economy also appeared to be booming in the 1920s.
  - B. Remember also, the economy of the 1920s also appeared to be booming in the 1920s.
    - 1. Between 1925 and 1928, the market value of all stocks rose from \$27 billion to \$38.4 billion. By 1929, stock values hit \$\_\_\_\_\_\_.
    - 2. \_\_\_\_\_ (what \$ could actually buy) had increased more than 40%.
    - 3. Unemployment averaged below \_\_\_\_\_\_%.

2. 3. spite of these puble brewing A. The eco B. The ric 1.	Lots of people started wildly buying stocks with  Lots of people hoped to "get rich quick."  It was definitely a time of great optimism.  e apparent positive changes in life in the '20s, the reality was much less sunny. There was gunder the surface. The reality was that:  onomy was  h were getting richer, and the poor poorer.  Personal wealth was concentrated in a tiny percentage of American families  a) In 1929, only .1% of the population had incomes of more than \$100,000  b) 71% of families earned less than \$2,500 per year  c) of families had no savings

ne problem w	
ne problem wi	·.1 1 · / / 1·
	ith businesses/consumer spending:
A. With th	ne advent of credit, things got complicated.
1.	Advertising made people believe they HAD to buy things.
2.	Store owners had enough confidence in the economy to let customers buy goods with an (and interest).
3.	Credit buying also meant that people were pumping money into the economy that actually didn't exist. Meaning what?
1.	There were too many consumer products being produced in part because wages did not rise as fast as production.  a) People could not afford to buy the goods as fast as they were made and even when they did buy, people often paid in credit so no money changed hands.)  By the late 1920s, the country's warehouses held piles of un-bought consumer goods.  Industries like auto, steel, rubber and glass were all experiencing a slow down. WHAT DOES THIS MEAN IN REAL TERMS?
	ith farming
	1. 2. 3. B. Busines 1.

1.	How did weather, combined with poor farming practices compound to make the Dust Bowl
	so devastating for farmers?

VI.	The p	oroblem	with	the	stock market	<ul> <li>absenc</li> </ul>	e of regu	ılation
-----	-------	---------	------	-----	--------------	----------------------------	-----------	---------

- A. Compounding the problem was that fact that thanks to changes in stock buying practices in the 1920s, more people began to buy stock in the 1920s hoping to get rich quickly.
  - Consumers were encouraged by brokers, banks and even the president to
     \_\_\_\_\_\_, whereby
  - 2. People were buying stocks with money they didn't have through something called \_\_\_\_\_\_\_, in which they would pay a fraction of the price and borrow the rest.
  - 3. Companies also contributed to the problem, *watering their stock* to give customers the appearance of a better product than was actually being produced. MEANING?

4. WHY ARE THE ABOVE STOCK PRACTICES CONCERNING WHEN WE CONSIDER THE STATE OF THE STOCK MARKET IN THE LATE 1920S?

All of these factors would ultimately lead to the stock market crash of 1929
--

I.	On October 29, 1929, known as A record,					
	shares of stock were sold (vs. the average of 4-8 million shares a day in 1928.) Overall					
	losses amounted to \$					
II.	Eventually, the stock market crash ended up affecting the people who had never owned a single share of stock, and even people from other countries. How?					
III.	By 1932, a of the American labor force was out of a job.					
IV.	Thousands of banks closed because they could not return their depositors' money or sell foreclosed properties. (Bank run -> Bank failure)					
V.	The stock market crash of 1929 was NOT the cause of the Great Depression. Instead, it was only the day the prosperity bubble burst. Deeper problems were the REAL underlying causes of the Great Depression.					
	RECAP: What were these economic problems that were brewing under the surface? (LIST 4)
